Dear Langan hiring team,

I am a senior at Virginia Tech studying Computer Science with a concentration in Data-Centric Computing and a minor in Mathematics, and I am excited to apply for the GIS Intern / Co-op position for the summer. I am particularly interested in this opportunity because Langan's integrated engineering and environmental consulting work, including GIS and data management services, aligns with my interests in applying technical skills to real-world spatial and data challenges.

Through my coursework and technical projects, I have developed strong programming, data analysis, and problem-solving skills, and I enjoy working with spatial data and analytical tools. I am eager to learn from and contribute to a collaborative team where I can grow my GIS and software skills while supporting meaningful project outcomes.

Thank you for your consideration.

Sincerely,
Maxwell Brooks
